

**project phase (Part-II)**  
**Cloud deployment models**

Date	02-11-2023
Team ID	NM2023TMID16780
Project Name	<b>Creating an sponsored post for Instagram</b>

**There are three common cloud deployment models**

Public Cloud	This model involves using cloud services from a third-party provider, where resources are shared among multiple organizations. It offers scalability, flexibility, and cost-effectiveness.
Private Cloud	In this model, cloud infrastructure is dedicated to a single organization, either on-premises or hosted by a third-party provider. It provides enhanced security, control, and customization options.
Hybrid Cloud	This model combines both public and private clouds, allowing organizations to leverage the benefits of both. It offers flexibility, scalability, and the ability to handle varying workloads

# Cloud Deployment Models
